2D shape – sorting

b What other ways could you sort them? Work with a partner and your pattern blocks to find some other ways. Record your ways here.

What to do next:

Sort your pattern blocks following a secret rule. See if your partner can work out what your secret rule is.

2D shape – sorting

Mathematicians sort and group shapes according to their **vertices**, **sides** and **lines**.

Let's look at these shapes.

We say these are all **squares** because they all have 4 sides, which are all the same length. They each have 2 sets of parallel lines. They have 4 right angles. They are different colours and sizes and in different positions, but they are still squares.

There are different rules for different shapes.

1 Are these all triangles? Explain your thinking.

2 Are these all circles? Explain your thinking.

3 Are these both pentagons? Explain your thinking.

2D shape – 4-sided shapes

What to do:

Find a square and a rectangle. Look closely at the sides, angles and lines to work out what is **the same** and what is **different** about these 2 shapes. Record them here.

| Same | Different |
|--------------------------------------|-----------|
| • they have 2 sets of parallel lines | |
| | |
| | |
| | |

What to do next:

Look through your 2D shapes. What other 4-sided shapes can you find? Trace or draw them here.

Look closely at the lines, vertices and sides to work out how they are the same as squares and rectangles and how they are different. Talk it through with your partner.

3

2D shape – 4-sided shapes

What to do:

Work with your partner to help these shapes answer some questions. Look at the shape blocks to help.

2D shape - 4-sided shapes

1 Draw a square, a rectangle, a trapezium and a rhombus. Label them.

| • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • | • |

| | • | | | | | | | | | | • | | | • | • | | | | |

2D shape – triangles

What to do next:

Play a few times.

Take turns directing each other to make different kinds of triangles.

'Make me a triangle with a square vertex.' 'Make me a triangle with 2 long sides and 1 short side.'

Check that you can make it yourself before you ask your partner to make it.

2D shape – 5- and 6-sided shapes

1 Draw 2 different pentagons. Make 1 regular and 1 irregular.

2 Draw 2 different hexagons. Make 1 regular and 1 irregular.

2D shape – 8-sided shapes

1 Circle the regular octagons.

2 Circle the irregular octagons.

3 Draw two octagons – one regular and one irregular.

2D shape – explore

1 How many triangles can you find?

Compare your answer with that of a partner. Do you both agree?

2 How many rectangles can you find? Compare your answer with that of a partner. Do you both agree?

3 Cut out the triangles below. What different shapes can you make by joining them in different ways? Remember you can make irregular shapes. Record the different shapes you make in your maths book.

SERIES

9

2D shape – explore

 \bigcirc a bag \bigcirc 2D shapes

What to do:

You are going to take turns working out Oh no! I thought it was a square but it is what a shape is that you can feel but not see. a rhombus because it Put 1 shape into the bag at a time. has 2 slanting sides. Don't let the first player see what it is! Player 1, you need to reach into the feely bag and see if you can identify the shape. You need to name it AND say why you know what it is. For example, you might say 'This is a triangle – I know that because I can feel 3 sides and 3 vertices.' Pull the shape out. If you are right, you keep the shape. If you just name it but don't describe it, or if you are wrong, the shape goes back in the bag. Player 2 has a turn, then Players 3 and 4. Play until all the shapes are gone or until 1 player has 5 shapes.

What to do next:

Put all the shapes into the bag. Take turns directing each other to pull out a particular shape – 'Pull out a rhombus, please.'

2D shape – tessellation

What to do:

Create a pattern or picture with pattern blocks. You could create a robot, person, butterfly or flower.

What different 2D shapes did you use? Record them here.

What to do next:

Experiment with the pattern blocks to answer these questions.

Remember, you may need to flip, slide or turn the blocks.

Can we tessellate if we **only** use:

| a | squares? | b | rhombuses? | С | trapeziums? |
|---|------------|---|------------|---|-------------|
| d | triangles? | е | pentagons? | f | hexagons? |
| | | | | | |

Geometry

11

FRIFS

TOPIC

2D shape - tessellation

What to do:

This is a triomino. It is 3 squares in an L shape.

- Colour each triomino below a different colour and cut them out.
 Make sure you keep each triomino whole!
- **b** Can you fill the grid with the triominoes? You will need to flip, slide and turn them to make them fit.

2D shape – symmetry

This picture of a butterfly is symmetrical. If we fold it along the dotted line, both sides match exactly.

1 Draw the other side of the pictures to make them symmetrical. Colour them symmetrically.

2 Draw the other side of the shape. Label each shape.

13

3D shape – faces, edges and vertices

What to do:

Choose a 3D shape and then give it to your partner to hold for you.

Close your eyes and imagine its faces. How many are there? What shapes are they? Are they curved or flat?

Keep your eyes closed and ask your partner to pass you that 3D shape. Feel its faces. Now tell your partner about the faces. They will record the information for you. Swap roles and play until the faces of all the 3D shapes have been described.

3D shape – faces, edges and vertices

What to do:

Your task is to investigate the faces, edges and vertices of some common classroom or household objects. Record the number of each to finish the fact files.

What to do next:

Draw lines to join the objects with their matching 3D shapes on the right.

Geometry Copyright © 3P Learning

3D shape – prisms

1 Look at the end faces of these 3D shapes. Choose words from the box to finish the statements.

| a | My end faces are | | hexagons |
|-----|------------------|----------|-------------|
| | I am a | _ prism. | hexagonal |
| b | My end faces are | · | pentagons |
| | I am a | _ prism. | pentagonal |
| c 🔨 | My end faces are | | rectangles |
| | I am a | _ prism. | rectangular |

This shape can be called a rectangular prism even though its faces are square. Do you know why? It's because squares are actually part of the rectangle family.

- **2** Let's look at this shape some more.
 - **a** We sometimes call it another name.

Do you know what it is?

____u___e

b What are some real life objects shaped like it?

3D shape – pyramids

Pyramids have one base. The **base** always has straight sides. The other faces are always **triangles**. The triangular faces meet at a point called the **apex** (a special type of vertex). Pyramids are named after their bases. This is a **pentagonal pyramid**.

1 Match the pyramids to their labels.

2 Use real 3D shapes to help you finish the fact stories, or can you find a rule to help you?

3D shape – pyramids

You will need: K scissors

What to do:

Cut out the 3D shape cards and put them in a pile, face down. Cut out the labels and put them side by side, face up.

Turn over the 3D shape cards one at a time and put them under the right label. You can play this by yourself or you can race against other people. Get somebody to check. How did you go?

Now, can you do it even faster?

What to do next:

Combine your 3D shape cards with those of a partner and play Snap!

3D shape – spheres, cylinders and cones

1 What is the **same** about these 3 3D shapes?

2 What is the **different** about these 3 3D shapes?

3 Draw the shape you would see if you cut these cross-sections.

3D shape – explore

You will need: Scissors

What to do:

TOPIC

Cut out the descriptions and the 3D shapes and match them. You can use real 3D shapes to help you make your decisions. When you are sure you are right, stick them in your maths book.

Label each 3D shape. You score 5 points for each 3D shape that is correctly matched and named.

Copyright © 3P Learning

1 Look at the grid. Draw the figure that is:

c is? It is _____ me.

What to do:

Use the clues to colour the circles. You may want to experiment with coloured counters before you colour.

- orange is between red and blue
- green is below red
- black is to the left of both yellow and green

1 You are facing the way the arrow points. Colour the shape the spinner would point to if it turned:

- **2** To get from your classroom to the front office, how many left and right turns must you make? Close your eyes and picture the path. Record the turns you make in your head. Now test it out.
- **3** Choose another start and end point and test it out. Record your turns and where you went.

Position – paths and directions

- **1** Wally's class turn their classroom into a jungle for the school fete.
 - **a** Colour the path Wally takes to get through the jungle without bumping into anything scary.

b Find another path that Wally could take. Record it here.

25

Position – paths and directions

You will need: 🧭 a partner

What to do:

You are going to describe a path to your partner using terms such as left, right and forward.

Plan your path round the classroom or school. Once you are happy with it, write it below. Also write where your partner should end up on a secret scrap of paper.

Read your directions one by one to your partner or give them to him or her so they can read them.

When they have finished, check that they are where they are supposed to be. If not, walk the path again together and work out where things went wrong. Fix any incorrect directions.

Turn right and walk 4 steps forward. Stop, now turn left and walk 3 steps.

Position – mapping

What to do:

Decide who will go first. Choose 5 classroom objects to position on the tray. Cover the tray with the cloth. Uncover the tray for the count of 10 then re-cover.

Your partner then has to draw or write the objects in the correct position on one of the trays below.

Swap roles. Play 3 times each. If 5 objects are too easy for you, feel free to add a few more!

Copyright © 3P Learning

SERIES TOPIC

Position – mapping

What to do:

Map your classroom using the grid below to help you. Make sure you include the position of the doors, windows and your teacher's desk. Sketch everything in lightly.

What to do:

Compare your map with someone else's. Do you agree on the positioning of objects? Make any changes you need to. Once you are happy with your map, colour and label the objects.

Position – turns

We change our position if we make a turn. If we turn until we come back to the same position we have made a **full** turn. If we turn until we are facing in the opposite direction we have made a **half** turn. Half of a half turn is a **quarter** turn. Three-quarter turns make a **three-quarter** turn.

1 A car starts in this position:

What type of turn has it made to end up in the following end positions?

turn

Position – turns

1 Are these turn clockwise or anti-clockwise?

SERIES TOPIC

30

Position – turns

What to do:

Choose a person to be the leader. The leader stands in front of the group, who also stand, and shouts 'turn' commands. He or she can us 'full turn', 'half turn', 'quarter turn' and 'three-quarter turn'. If a child makes a mistake they sit down until only one child remains. This child becomes the next leader.

The game can be made harder by shouting the commands faster and/or by using 'clockwise' and 'anti-clockwise' in the commands.

If the leader is

THINK

You will need: 🧭 a partner

What to do next:

Your partner will be a robot in this game. You are the controller. You decide on a place in the room that you want your robot to reach and give the robot commands to reach it, such as '3 steps forward', 'quarter turn clockwise', '2 steps forward', 'quarter turn anti-clockwise'. The robot has to follow the commands exactly, even if it means going wrong.

When the robot reaches the target, swap roles.

For a greater challenge, the controller can command two robots. They start at different places in the room, and the controller gives commands to the first one, and then the other, trying to make them meet somewhere in the middle.

Patterns and rules – repeating patterns

1 Continue these patterns both ways.

2 Create your own pattern rules in the grey boxes. Swap with a partner and continue each other's patterns both ways.

| a | | | | | |
|---|--|--|--|--|--|
| | | | | | |
| b | | | | | |

Patterns and rules – repeating patterns

1 Circle the rule in each repeating pattern. Record it below.

2 Make up a rule and record it somewhere secret. Draw your rule (or make it with blocks) and repeat it over and over. Ask a partner to identify your pattern rule and record it here. Tick it if they were right.

Patterns and rules – repeating patterns

1 Look at these rows. Tick the ones that follow a pattern rule.

2 Look at these rows. They started off as patterns but went a bit astray. Circle the parts that don't follow the patterns and give the rows a good telling off. Tell them there are many rows that would like to be patterns and if they can't do it properly, you'll give the job to other rows.

Patterns and rules – translating patterns

1 Look at this pattern. Translate it by changing each shape.

2 a Think of a simple pattern rule you could make using 3 different pattern blocks.

Record it here.

- **b** Make your rule with pattern blocks and repeat it 5 times.
- **c** Ask a partner to translate your pattern using different pattern blocks.
- **d** Record their translated rule here.

Patterns and rules – growing patterns

What to do:

b What is the rule? _____

What to do next:

Think of a different take away rule. Write it somewhere secret. Don't let your partner see! Put out 20 counters in a row. Then put out your next row of counters following your take away rule. Continue until your last row would have zero counters.

Guess each other's secret rule!

Patterns and rules – growing patterns

1 Work out the rule and draw the next part of each pattern.

2 Make your own growing pattern with blocks. Record the rule and the first few parts of the pattern here.

37
